Your kitchen. Your bath. A plan for every detail.

Cabinets. Countertops. Vanities. Sinks. Faucets. Hardware.

Kitchen and bathroom planning. Named finishes, product selections and relative price tiers. Practical worksheets and optional DIY support.

Free to use. No purchase or email required.
You don't have to hire AniPros.

Your rooms, step by step.

Choose a section below. Use Back, Contents and Next at the bottom of each page. Complete the planning pages before approving an order.

01 / PLAN YOUR ROOMS 03

Kitchen worksheets, bathroom planning, compatibility and relative price tiers.

02 / UNDERSTAND THE CABINETS 18

Construction, correct cabinet outlines and dimensional examples.

03 / CHOOSE YOUR DOORS 23

Named finishes, consistent door portraits and exact selection IDs.

04 / COUNTERTOPS + MATERIALS 44

Benefits, tradeoffs, care and named surface selections.

05 / COMPLETE KITCHEN + BATH 73

Sinks, hardware, vanities, faucets, mirrors, storage and more.

06 / PREPARE + BUILD 139

Ordering, receiving, assembly and installation preparation.

07 / OPTIONAL DIY HELP 145

Measuring, design, assembly, delivery and finishing assistance.

Selection IDs keep similar-looking finishes separate. Use the exact ID with your quote. Matching doors, boxes, trim and accessories must belong to the specified product system.

Define your kitchen project.

Make a short written brief before choosing cabinets. A clear scope makes quotes and timelines easier to compare.

PROJECT / ROOM / DATE

WHAT WORKS TODAY AND SHOULD STAY

WHAT MUST CHANGE

YOUR TOP THREE PRIORITIES

WHAT YOU WILL DIY / WHO WILL HELP

TARGET BUDGET / TARGET COMPLETION

Decide early: keep the same footprint, replace cabinets in place, or move walls and utilities. Moving systems changes the trade work, approvals, schedule and budget.

Budget the whole room.

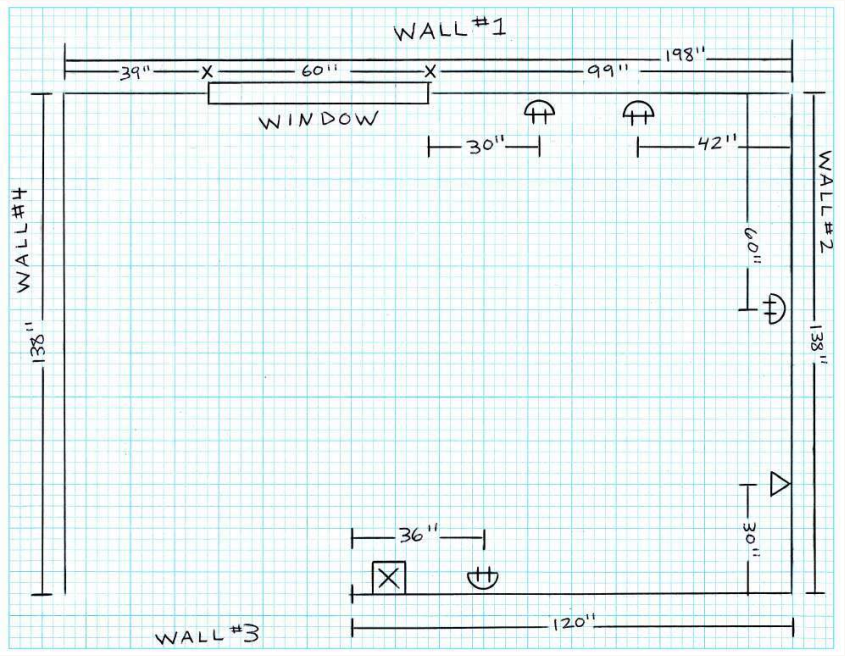

Compare complete scopes. Cabinet price alone does not include everything needed to finish a kitchen.

Category	Planned	Actual
Cabinets and matching panels	$_____	$_____
Storage organizers and hardware	$_____	$_____
Delivery, tax and assembly	$_____	$_____
Countertops, supports and backsplash	$_____	$_____
Sink, faucet and appliances	$_____	$_____
Lighting and utility work	$_____	$_____
Flooring, wall repair and paint	$_____	$_____
Permits / inspections as applicable	$_____	$_____
Tools, rentals and disposal	$_____	$_____
Temporary kitchen	$_____	$_____
Contingency reserve	$_____	$_____
TOTAL	$_____	$_____

Compare each quote against the same list. Record exclusions, who confirms field measurements, return restrictions and the damage-reporting deadline. Keep a separate reserve for uncertain conditions.

Measure the room carefully.

Record actual inches from consistent reference points. Measure the existing room before ordering or demolition.

Room-sketch example. Your project needs its own verified dimensions.

01 Walls and openings

Label each wall. Measure its full length and each segment. Include window and door trim.

02 Height and fixed services

Record ceiling and soffit heights, sill heights, outlets, pipes, drains and vents.

03 Cross-check the numbers

Compare the total wall length with all segments. Check floor high points, wall plumb and corner angles.

Sketch your kitchen.

Use one small square for 3 inches. Print at 100%. Write actual dimensions on the drawing; do not order from the grid alone.

Wall labels: A / B / C / D. Mark doors, windows, appliances, plumbing and electrical.
Project: _____ Date: _____

Record the appliances first.

Use exact model sheets. A nominal appliance size is not the required cabinet opening or installation clearance.

Appliance	Model / opening W × H × D	Clearance / service notes
Refrigerator	_____ _____	_____ _____
Range / cooktop	_____ _____	_____ _____
Wall oven	_____ _____	_____ _____
Dishwasher	_____ _____	_____ _____
Microwave / hood	_____ _____	_____ _____
Sink / disposal	_____ _____	_____ _____

Confirm door and drawer travel, handles, refrigerator ventilation, hood requirements, sink support, drain location and accessible shutoffs. Check the appliance removal route after floors and countertops are installed.

Plan how the room will work.

Choose a layout that fits the actual space and the people using it. Test a taped layout before final approval.

01 Map the work zones

Place food storage, preparation, cooking and cleanup where the sequence feels natural. Put frequently used items near their task.

02 Test opening conflicts

Open the refrigerator, dishwasher and oven on the plan. Check opposing drawers, handles at corners and doors beside walls.

03 Check movement and seating

Allow comfortable circulation, chair movement and access for your household. Confirm clearances with the designer and applicable requirements.

04 Plan the corners and ends

Reserve filler, blind-corner allowances, finished sides and appliance panels. A cabinet run is more than the sum of box widths.

05 Plan light and services

Locate task lighting and outlets. Coordinate water, drains, gas, ventilation and power with qualified trades before closing walls.

For an island, verify the floor and approved anchoring method before drilling. Unknown slabs may contain post-tension tendons, wiring or piping.

Sequence the remodel.

Use readiness milestones, not a promise that every kitchen can be finished in a weekend.

01 Approve the design

Verify measurements, appliance sheets, construction, finish samples and every cabinet position.

02 Confirm the order

Check quantities, fillers, trim, organizers, hardware, lead times, delivery terms and workshop date.

03 Prepare the room

Receive critical materials. Arrange the temporary kitchen, dust separation, disposal and any required trade work or approvals.

04 Install the cabinets

Complete preparation, assembly, leveling, joining and verified structural attachment in the product-required sequence.

05 Template and finish

Coordinate countertop templating after the cabinets are stable and ready. Complete splash, trim and utility reconnections.

06 Inspect and hand over

Check doors, drawers, appliances, stability, leaks and service access. Keep manuals and warranty records.

Prepare your tools and supplies.

Match the kit instructions and site conditions. Decide what to buy, borrow, rent or have a professional handle.

Measure and mark

- [ ] Tape, pencil, square and straightedge
- [ ] Long level or laser
- [ ] Stud finder and verified layout
- [ ] Appliance sheets and product manuals

Assemble and adjust

- [ ] Clutch-controlled drill / driver
- [ ] Correct bits and hand screwdrivers
- [ ] Padded clamps and protected workbench
- [ ] Labeled hardware containers

Fit and support

- [ ] Specified mounting and joining hardware
- [ ] Approved shims or adjustable feet
- [ ] Suitable scribing and cutting tools
- [ ] Stable platform, cabinet lift and helper

Protect and clean

- [ ] Eye and hearing protection
- [ ] Task-appropriate dust control
- [ ] Suitable respiratory protection
- [ ] Floor protection, light and vacuum

Use the actual required fasteners. Mounting screws, cabinet joining screws and decorative trim fasteners serve different jobs.

Plan the bathroom as a system.

Choose the vanity, top, sink and faucet together before opening walls or ordering.

01 Start with the room

Record wall lengths, door swing, ceiling height, windows, toilet location, tub or shower footprint and every fixed service. Photograph the existing plumbing.

02 Choose the vanity footprint

Measure finished width, depth and height. Account for baseboards, wall irregularities, side fillers, drawer travel, handles and the route into the room.

03 Map storage around plumbing

Confirm the drain and supply locations against the actual cabinet interior. Drawers and shelves must clear traps, shutoffs and service access.

04 Check the complete assembly

A vanity cabinet, vanity set, top and sink may have different inclusions. List every included and separately purchased component before comparing quotes.

05 Keep wet-area work separate

A vanity update does not include shower waterproofing, ventilation, electrical or plumbing relocation. Define those scopes and use qualified trades where required.

Fit the vanity to your room.

Nominal width is only the starting point. Use the exact specification drawing.

01 Freestanding

Check feet, baseboards, rear plumbing openings and wall attachment. A freestanding label does not mean the unit needs no securement.

02 Wall-hung

Confirm the manufacturer's load and fastening requirements, structural backing and wall condition. Plan reinforcement before wall finishing.

03 Single or double sink

Compare usable counter space, cabinet storage, drain positions and household needs. Two sinks require the correct plumbing and top configuration.

04 Top and backsplash

Verify outside dimensions, overhang, wall fit, faucet holes, sink mounting and backsplash inclusion. Custom tops need their own templating and fabrication scope.

05 Mirror and lighting

Coordinate mirror width and mounting height with the user, faucet and lighting. Check electrical supply, driver access and installation instructions for powered mirrors.

Match the sink and faucet.

Choose compatible parts before approving the countertop or drilling holes.

01 Mounting and hole count

Confirm deck-mounted versus wall-mounted; single-hole, centerset or widespread requirements; exact hole spacing and allowable deck thickness.

02 Spout reach and height

Use the specification drawing to check where water lands in the bowl, hand clearance and splash risk. A tall vessel sink needs a compatible faucet and installation height.

03 Drain and overflow

Match the drain to the sink opening, overflow configuration and tailpiece. A drain supplied with a faucet is not automatically compatible with every sink.

04 Kitchen working clearance

Test pull-down hose travel, handle movement near the backsplash, window clearance and interference with soap dispensers or filtered-water taps.

05 Finish coordination

Compare physical samples. Brass, brushed gold, nickel and black finishes can differ between product lines. Verify cleaning instructions before using chemical cleaners.

Sequence a bathroom refresh.

Use readiness checks to avoid dismantling the room before its replacement parts are ready.

01 Measure and select

Approve the vanity, sink, faucet, drain, mirror, lighting and hardware together. Keep model drawings with the plan.

02 Confirm the scope

Identify demolition, disposal, plumbing, electrical, backing, wall repairs, flooring and any approvals. Name who handles each task.

03 Receive and inspect

Inspect finishes, glass, top edges, bowls, hardware and dimensions before removing the existing vanity. Follow the supplier's damage-reporting deadline.

04 Prepare and install

Complete backing and trade changes before final wall finishes. Follow the product's mounting, support, sealing and connection requirements.

05 Test and document

Verify drainage, leaks, door and drawer travel, secure attachment and electrical operation. Keep care instructions and warranty documentation.

Record the bathroom details.

Complete one worksheet for each bathroom. Confirm final dimensions after wall and floor finishes.

ROOM / USER NEEDS / WHAT STAYS

VANITY: MAXIMUM W x D x H / MOUNTING TYPE

DRAIN / SUPPLY LOCATIONS / BACKING

TOP / SINK / FAUCET / DRAIN SELECTION IDS

MIRROR / LIGHTING / STORAGE SELECTION IDS

TRADE WORK / ACCESS / DELIVERY / BUDGET

Understand the price tiers.

Compare like-for-like products within one category. Tier symbols are relative planning guidance, not dollar quotes.

Value / $

Straightforward products and a simple scope.

Examples: Standard cabinet sizes; basic hardware; simple laminate runs or readily available entry selections.

Cost drivers: Fewer special parts, simple finishes and standard dimensions can reduce the material and installation scope.

Select / $$

More finish choices and everyday upgrades.

Examples: Coordinated cabinet finishes, practical storage upgrades, selected quartz patterns and complete vanity combinations.

Cost drivers: Additional hardware, coordinated parts, upgraded finishes and more demanding assembly can add cost.

Premium / $$$

Distinctive materials, details and specialized work.

Examples: Elaborate veining, selected natural stone, fluted furniture details, larger vanities and upgraded fixtures.

Cost drivers: Material selection, finish processes, slab yield, large formats, precision cutouts and specialist handling influence cost.

Signature / $$$$

A highly specified finish with complex execution.

Examples: Selected Dekton or other specialty surfaces, statement slabs, waterfall ends and highly coordinated feature installations.

Cost drivers: Specialized fabrication, large or fragile pieces, detailed edges, seam matching, supports and transport can dominate the budget.

Relative planning tiers, not verified selling prices. Compare within the same product category; installed cost depends on quantities, site conditions, fabrication and labor. Product tier assignments are editorial estimates and must be confirmed by quote.

Compare the complete installed cost.

A more expensive material is not automatically the best choice for your room or routine.

01 Separate the product from the project

Record cabinet-only, complete vanity set or slab-only pricing separately from delivery, assembly, templating, cutouts, support, installation, removal and utility connections.

02 Count the details that change the quote

Waterfall ends, mitered edges, vein matching, extra seams, difficult access, specialty hardware and wall reinforcement can add significant scope.

03 Compare inclusions

Verify whether the top, sink, faucet, drain, mirror, backsplash and mounting hardware are included. Photographs may show accessories sold separately.

04 Check the maintenance tradeoff

Natural variation, etching, heat sensitivity, refinishing and sealing matter as much as appearance. Use the exact product care sheet.

05 Approve the actual selection

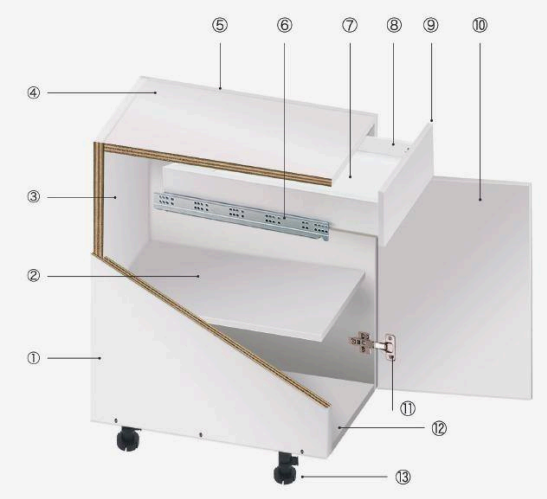

Price rankings can change by color, thickness, size, supplier and local fabrication. Only the written project quote establishes an AniPros selling price.

Products marked Quote required have no reliable item-level price ranking. Value, Select, Premium and Signature labels are editorial relative positioning unless a verified basis is stated.

Choose the cabinet system.

Door appearance and box construction are separate decisions. Similar-looking cabinets are not automatically compatible.

Framed

A face frame surrounds the box opening. Check door overlay, frame width and the usable opening for accessories.

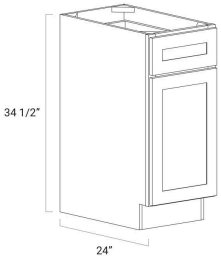

Frameless

Doors attach to the box sides. Check the panel thickness, drilling pattern, edge finish and specified assembly system.

Compare	Confirm for the chosen product
Box / back / shelf	Material, thickness, finish and mounting zones
Door / drawer	Profile, overlay, material and adjustment
Hardware	Hinges, slides, opening angle and load rating
Matching pieces	Panels, fillers, toe kicks, molding and touch-up

Cabinet types and dimensions.

Reference sheet 1. Dimensions shown are examples from one framed system, not universal sizes across all cabinet lines. W = width, H = height, D = depth. All dimensions are inches.

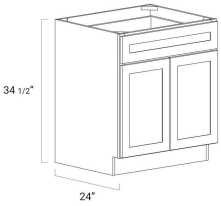

T01 / Single-door base

12, 15, 18 or 21 W × 34 1/2 H × 24 D in.

One drawer above a door; One adjustable shelf

Use for shelf storage; locate pull-outs only after checking the clear frame opening.

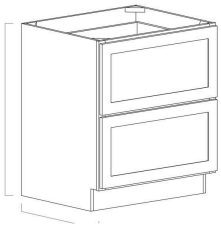

T02 / Double-door base

24, 27, 30, 33 or 36 W × 34 1/2 H × 24 D in.

Wide shelf storage; One adjustable shelf

Specify wider 39/42-inch variants separately because the catalog changes the drawer arrangement.

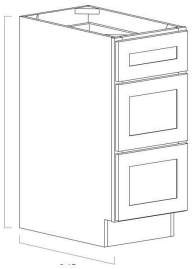

T03 / Two-drawer base

30, 33 or 36 W × 34 1/2 H × 24 D in.

Two deep drawers; Full-extension glides

Place cookware near the cooking zone. Check usable interior dimensions before buying dividers.

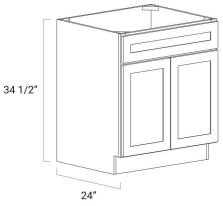

T04 / Three-drawer base

12, 15, 18, 21, 24, 27, 30, 33 or 36 W × 34 1/2 H × 24 D in.

Shallow top drawer and two deeper fronts; Top front aligns with standard base cabinetry

Separate utensils from larger cookware; interior drawer capacity is smaller than outside box dimensions.

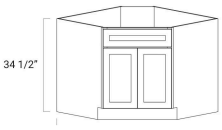

T05 / Sink base

30, 33, 36, 39 or 42 W × 34 1/2 H × 24 D in.

False drawer front; Space for sink and services

Size the cabinet from the sink manufacturer's minimum base requirement, not bowl width alone.

T06 / Diagonal sink base

42-inch corner model; 34 1/2 H × 24 D in.

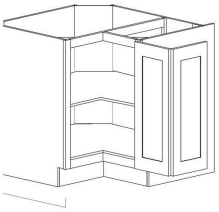

Diagonal front at a corner; False drawer front; no shelf

Check the full corner footprint. Keep dishwasher placement and standing space in the layout review.

Use the matching product specification and approved layout for the order. Cabinet footprint, usable opening and appliance cutout are different measurements.

Cabinet types and dimensions.

Reference sheet 2. Dimensions shown are examples from one framed system, not universal sizes across all cabinet lines. W = width, H = height, D = depth. All dimensions are inches.

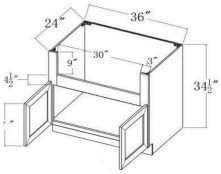

T07 / Lazy Susan corner base

33 or 36-inch corner model; 34 1/2 H × 24 D in.

Full-height bi-fold door; Wooden trays ordered separately

This is a corner cabinet, not a blind-corner pull-out. Check both wall legs and adjoining handles.

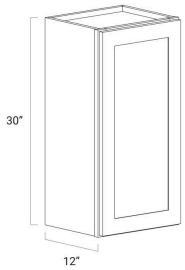

T08 / Apron-front sink base

36 W × 34 1/2 H × 24 D in.

Open upper area for an apron-front sink; Lower storage doors

Use the exact sink template and support instructions; apron height and cutout are sink-specific.

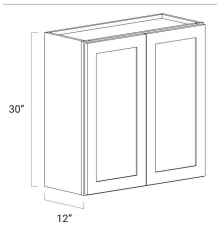

T09 / Single-door wall cabinet

9, 12, 15, 18 or 21 W × 30 H × 12 D in.

Two adjustable shelves; One hinged door

Also offered in 36/42-inch heights in this system; choose elevation before trim.

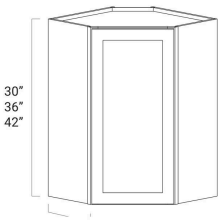

T10 / Double-door wall cabinet

24, 27, 30, 33, 36 or 39 W × 30 H × 12 D in.

Two adjustable shelves; 39-inch version has a center stile

Check access around the center stile when planning large dishes or accessories.

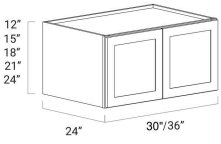

T11 / Diagonal corner wall cabinet

24-inch corner model × 30, 36 or 42 H; 12 D in.

Two adjustable shelves at 30/36 H; Three adjustable shelves at 42 H

Reserve both corner wall legs. Review crown returns and adjacent door travel.

T12 / Refrigerator bridge cabinet

36 W × 12, 15, 18, 21 or 24 H × 24 D in.

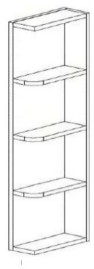

Deep cabinet above refrigerator; 24-inch-high model includes one shelf

Use refrigerator ventilation clearances and the finished floor level to set installation height.

Use the matching product specification and approved layout for the order. Cabinet footprint, usable opening and appliance cutout are different measurements.

Cabinet types and dimensions.

Reference sheet 3. Dimensions shown are examples from one framed system, not universal sizes across all cabinet lines. W = width, H = height, D = depth. All dimensions are inches.

T13 / Open end wall shelves

9 W × 30, 36 or 42 H × 9 D in.

Open storage at the end of a wall run; Visible shelf surfaces

Use for light, frequently handled items; avoid obstructing adjacent doors.

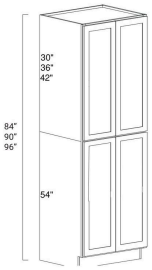

T14 / Single-door pantry

18 W × 84, 90 or 96 H × 24 D in.

54-inch lower portion plus upper portion; 18-inch rollout trays ordered separately

Allow for the seam-covering panel, delivery access and secure attachment.

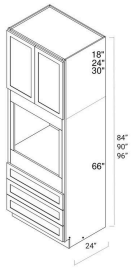

T15 / Double-door pantry

24 or 30 W × 84, 90 or 96 H × 24 D in.

Lower and upper portions assemble into a tall unit; Matching-width rollout trays ordered separately

Check both door swings, finished sides and the full-height installation route.

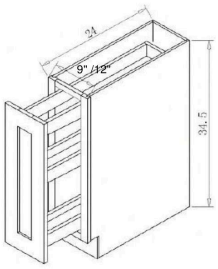

T16 / Tall single-oven cabinet

33 W × 84, 90 or 96 H × 24 D in.

66-inch lower portion plus upper portion; Dedicated wall-oven location

Outside cabinet size is not the appliance cutout. Use the exact oven model's support and ventilation sheet.

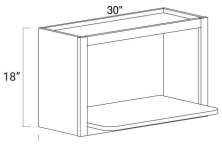

T17 / Spice-rack base

9 or 12 W; listed shelf depth 20 5/8 in.

Pull-out hardwood interior; Full-extension glides; no soft-close listed

Decorative handle required. Check the installed handle against adjacent appliances.

T18 / Microwave wall shelf cabinet

30 W × 18 H × 12 D in.; finished shelf 15 D in.

For a suitable countertop-style microwave; 5/8-inch finished shelf

Catalog frame opening with shelf is 26 3/4 W × 13 H × 14 5/8 D in.; appliance clearances still govern.

Use the matching product specification and approved layout for the order. Cabinet footprint, usable opening and appliance cutout are different measurements.

Read the dimensions correctly.

A well-planned order accounts for the cabinet box, the operating space and the finished room.

Measurement	What it means	What to check
Nominal box size	Width, height and depth of the listed cabinet.	Whether doors, rails, legs or trim are included.
Usable opening	Clear access inside a frame, hinge or drawer system.	Organizer width and full extension path.
Installed footprint	Space occupied after corner pull, fillers and panels.	Total wall run and adjacent door movement.
Appliance cutout	Opening required by the exact appliance model.	Support, ventilation and service access.
Finished height	Cabinet plus feet / toe kick and countertop build-up.	Floor high point, appliances and finished transitions.

01 Keep the unit system consistent

Record W x H x D in inches. Do not mix millimeter handle spacing with inch measurements.

02 Count the matching parts

List visible end panels, fillers, toe kicks, crown, light rail, appliance panels and touch-up separately.

03 Resolve corners before the order

Blind corners need a planned pull distance and door clearance. A diagonal corner and a lazy-Susan base do not use the same footprint.

Include the finishing pieces.

Small parts can determine whether the finished kitchen fits properly. Put them on the order before installation begins.

Finished panels

Coordinate visible ends, appliance sides and island backs with the finish.

Fillers and scribes

Allow doors and drawers to clear walls. Check the required width before ordering.

Top trim and molding

Coordinate ceiling height and returns. Confirm profile and matching finish.

Rollout trays

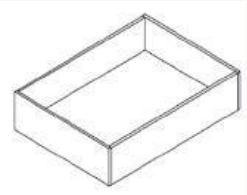

Check clear opening and hinge interference. Confirm rated capacity.

Corner hardware

Confirm the exact cabinet opening and handedness before choosing an insert.

Drawer accessories

Measure the usable drawer interior and choose dividers around the contents.

Compare countertop materials.

Benefits and tradeoffs matter as much as color. These are general material comparisons; the exact product instructions govern care and installation.

Engineered quartz

Mineral aggregate bound with resin; different from natural quartzite.

BENEFITS
Consistent patterns, stain resistance and no routine sealing for standard quartz products.

DRAWBACKS
Hot cookware can damage the surface. Edges can chip; do not assume an indoor product is suitable outdoors.

Care: Use mild approved cleaners, cutting boards and trivets. Follow the specific product care sheet.

DIY fit: Choose the color and prepare the cabinets; use a qualified fabricator for the top.

Granite

Quarried natural stone with individual mineral patterns.

BENEFITS
Durable working surface, natural variation and good heat resistance for normal kitchen use.

DRAWBACKS
Slabs and porosity vary; sealing may be needed. Heavy slabs, seams and cutouts require planning.

Care: Clean with a stone-safe neutral cleaner. Follow the stone/sealer schedule; use trivets and wipe spills promptly.

DIY fit: Approve the actual slab and layout; have a fabricator template, cut and install it.

Quartzite

Natural stone; not resin-bound engineered quartz.

BENEFITS
Distinctive natural veining and a hard, scratch-resistant surface in many selections.

DRAWBACKS
Absorption and mineral content vary. Sealing and careful slab selection are important; fabrication can be demanding.

Care: Use neutral stone cleaners and the fabricator's sealing guidance. Test the actual material rather than relying only on its sales name.

DIY fit: Choose and approve the slab; leave fabrication, support details and installation to a specialist.

No material is damage-proof. Use trivets and cutting boards, approve the actual sample and compare the full installed scope. Materials in this comparison are not a promise of current inventory.

Compare countertop materials.

Benefits and tradeoffs matter as much as color. These are general material comparisons; the exact product instructions govern care and installation.

Marble

Natural stone with characteristic veining and a softer surface.

BENEFITS
Distinctive veining and a natural appearance that develops a patina with use.

DRAWBACKS
Acids can etch the finish; it can also scratch and stain. Sealing does not make it acid-proof.

Care: Wipe spills quickly, use neutral stone cleaners and follow the sealing guidance. Expect more visible wear than with many harder materials.

DIY fit: Approve the actual slab and discuss care expectations; use professional fabrication and installation.

Porcelain slab

Large-format manufactured ceramic surface; check countertop-rated thickness and support.

BENEFITS
Low absorption, good stain and heat resistance, and no surface sealing for standard porcelain slabs.

DRAWBACKS
Edge details, cutouts and handling need care. The surface pattern may not run through the full edge thickness.

Care: Use nonabrasive approved cleaners. Protect from impact and follow the manufacturer's heat guidance; hot pads remain useful.

DIY fit: Select the look and edge detail; use a fabricator experienced with porcelain slabs.

Sintered / ultracompact surface

A manufactured mineral surface; composition and performance depend on the brand.

BENEFITS
Many products offer strong stain, heat and UV resistance, with options for indoor and approved outdoor uses.

DRAWBACKS
Hard surfaces still need protected edges and correct support. Specialized fabrication and cutout details are important.

Care: Follow the exact product manual for cleaning, impact, heat and outdoor approval. Do not assume all brands behave identically.

DIY fit: Approve the product and finish; use a trained fabricator for support, edges and installation.

No material is damage-proof. Use trivets and cutting boards, approve the actual sample and compare the full installed scope. Materials in this comparison are not a promise of current inventory.

Compare countertop materials.

Benefits and tradeoffs matter as much as color. These are general material comparisons; the exact product instructions govern care and installation.

Solid surface

Manufactured acrylic or polyester-based material; different from quartz.

BENEFITS
Nonporous surface, visually blended seams and integrated sink options. Many scratches can be professionally renewed.

DRAWBACKS
Can scratch and is sensitive to direct heat. Darker finishes may show wear more readily.

Care: Use the brand's cleaning method and trivets. Ask a qualified fabricator about refinishing deeper damage.

DIY fit: Simple prefabricated systems may suit an experienced DIYer; complex seams and integrated sinks need specialist work.

Laminate

A decorative wear surface bonded to a supporting core.

BENEFITS
Many colors and patterns; readily available prefabricated options can simplify a modest kitchen project.

DRAWBACKS
Hot cookware and cutting can damage the surface. Exposed core and poorly sealed joints are vulnerable to moisture.

Care: Use mild cleaners, cutting boards and trivets. Keep seams and sink cutouts sealed according to the product instructions.

DIY fit: A straightforward prefabricated run can be DIY-friendly with suitable tools and accurate cutout work.

Butcher block / wood

Wood strips or blocks joined into a top, with an oil or film finish.

BENEFITS
Warm appearance and a surface that can often be refinished, depending on its construction and coating.

DRAWBACKS
Water, heat and humidity changes require care. Oil-finished tops need periodic maintenance; sink areas need particular attention.

Care: Follow the finish-specific care sheet, dry spills promptly and renew oil when directed. Do not treat every coating as a cutting-board finish.

DIY fit: A simple top can suit an experienced DIYer; allow wood movement and follow sink, sealing and attachment instructions.

No material is damage-proof. Use trivets and cutting boards, approve the actual sample and compare the full installed scope. Materials in this comparison are not a promise of current inventory.

Dekton surface collection.

Ultracompact mineral surface. Branded product reference; sourcing and availability require confirmation.

01 Benefits

Low porosity, strong stain resistance and UV resistance; approved indoor and outdoor applications.

02 Tradeoffs and repair

Edges, openings and supports require specialist fabrication. Large panels require careful handling; damage is not always invisibly repairable.

03 Care

Neutral soap and water for routine cleaning. Follow the exact finish and product care instructions.

04 Suitable applications

Kitchen tops, vanity surfaces and approved wall or outdoor applications; confirm thickness and application.

05 Relative price position

Signature / Specialized fabrication, edge construction, slab yield and installation can raise the complete project cost. This is editorial positioning, not an official manufacturer price group.

Approve the exact color, finish, thickness and application. Product instructions and the fabricator’s approved details govern. AniPros is not represented as the manufacturer or an authorized dealer.

Silestone surface collection.

Hybrid mineral surface. Branded product reference; sourcing and availability require confirmation.

01 Benefits

Low porosity and stain resistance with a broad controlled color range.

02 Tradeoffs and repair

Avoid direct hot cookware and outdoor UV exposure. Repairs may remain visible.

03 Care

Use approved cleaners and trivets; do not add sealers unless the manufacturer specifies them.

04 Suitable applications

Indoor kitchen countertops and bath surfaces.

05 Relative price position

Premium / Collection, pattern, finish, slab size and fabrication affect cost; the brand is not a single price group. This is editorial positioning, not an official manufacturer price group.

Approve the exact color, finish, thickness and application. Product instructions and the fabricator's approved details govern. AniPros is not represented as the manufacturer or an authorized dealer.

Sensa surface collection.

Protected natural granite and quartzite. Branded product reference; sourcing and availability require confirmation.

01 Benefits

Individual natural patterns with factory stain-resistant treatment; routine resealing is not required for the genuine treated product.

02 Tradeoffs and repair

Natural variation requires approving the actual slab. Treatment does not make the stone immune to damage; repairs need a specialist.

03 Care

Neutral soap and water, prompt cleanup and trivets. Follow Sensa-specific care rather than a generic resealing schedule.

04 Suitable applications

Kitchen and vanity surfaces; confirm suitability for each stone and proposed application.

05 Relative price position

Premium / Stone selection, finish, treatment, usable slab yield and specialist fabrication affect the quote. This is editorial positioning, not an official manufacturer price group.

Approve the exact color, finish, thickness and application. Product instructions and the fabricator's approved details govern. AniPros is not represented as the manufacturer or an authorized dealer.

Plan for wear, repairs and location.

Ask about serviceability before buying. No repair method guarantees an invisible result.

Material	Repair / renewal planning	Location check
Quartz / mineral composite	Chips, cracks or finish damage need manufacturer / fabricator assessment.	Use indoors unless the exact product explicitly permits outdoor exposure.
Granite / quartzite	Ask a stone specialist about chips, stains, repairs and the finish.	Some selections suit outdoors; verify stone, finish, support and exposure.
Marble	Professional refinishing may address some surface wear; expect patina.	Confirm the exact application; acids and weather can alter the surface.
Porcelain / ultracompact	Edge and cutout damage needs specialist assessment; protect from impacts.	Check the exact product's outdoor and UV approval.
Solid surface	Some scratches can be professionally renewed; repairs depend on damage.	Use a product specifically approved for the planned exposure.
Laminate	Avoid assuming a damaged decorative face or swollen core can be restored.	Do not use a standard indoor top outdoors without express approval.
Wood / butcher block	Refinishing depends on construction, depth of damage and coating.	Check moisture exposure, finish, wood movement and attachment.

Do not sand, drill, polish or chemically repair a countertop without product-specific guidance. Save leftover material and the product identification if the fabricator recommends it.

More quartz options to sample.

These named catalog options are included for sample requests. Current product photos were unavailable, so no substitute images are shown.

Selection ID	Catalog option	Material	Next step
C019	Calacatta Atlas	Quartz	Request current sample
C020	Imperial Pearl	Quartz	Request current sample
C021	Sahara Silk	Quartz	Request current sample
C022	Calacatta Serenity	Quartz	Request current sample
C023	Taj Mahal Quartz	Quartz	Request current sample
C024	Pure White	Quartz	Request current sample

The option named Taj Mahal Quartz is listed as engineered quartz. It is not the same product as natural Taj Mahal quartzite. Confirm the exact selection ID and material on your quote.

YOUR SHORTLIST / SAMPLE REQUESTS

FINISH / THICKNESS / FABRICATOR NOTES

Plan the countertop handoff.

You can DIY the cabinets and use a fabricator for the countertop. Final measuring happens after the base cabinets are ready.

01 Choose the material deliberately

Engineered quartz and natural quartzite are different materials. Review the actual product care instructions, finish and intended use. Natural stone varies from slab to slab.

02 Approve the whole slab

Small samples can miss large veins and color changes. Agree on seam locations, vein direction, edge profile, backsplash and any waterfall panels.

03 Prepare the cabinets for templating

Have the cabinets level, secured and in their final positions. Provide sink, faucet, cooktop and accessory templates. The fabricator confirms support and overhang details.

04 Define what the quote includes

Record material and thickness, fabrication, cutouts, seams, supports, transport, installation, old-top removal and plumbing reconnection responsibilities.

Fabrication is specialist work. Cutting and grinding stone can create hazardous silica dust; use a qualified fabricator. Do not cut, drill or polish countertop material as a DIY step in this guide.

Choose the sink with the cabinet.

Product-reference examples. Record the selection ID and verify the exact model and matching installation information with the order.

S01 / Single-bowl workstation sink

33 × 19 × 10 in.

Undermount. Rectangular single bowl; Accessory display shown separately in source

S02 / Rectangular single-bowl sink

32 × 19 × 10 in.

Undermount. Silver, black or gold options listed; Single bowl

S03 / Rectangular double-bowl sink

32 × 19 1/8 × 9 1/2 in.

Undermount. Silver, black or gold options listed; Divided bowls

S04 / Compact rounded single bowl

23 3/8 × 17 7/8 × 9 in.

Undermount. Rounded inner corners; Single bowl

Sink fit: outside size is not the cutout or minimum base size. Handle fit: listed length may differ from screw-hole spacing. Confirm mounting details before fabrication or drilling.

Choose the sink with the cabinet.

Product-reference examples. Record the selection ID and verify the exact model and matching installation information with the order.

S05 / Wide rounded single bowl

29 7/8 × 18 1/16 × 9 in.

Undermount. 16-gauge and 18-gauge variants listed; Separate product variants; choose gauge in quote

S06 / Medium rectangular single bowl

27 × 18 × 9 in.

Undermount. Single bowl; Rectangular profile

S07 / Rounded double-bowl sink

32 3/8 × 18 1/8 × 8 1/8 in.

Undermount. Two bowls; Rounded corners

S08 / Single-bowl drop-in sink

33 × 22 × 9 in.

Topmount. Deck shown with faucet holes; Single bowl

Sink fit: outside size is not the cutout or minimum base size. Handle fit: listed length may differ from screw-hole spacing. Confirm mounting details before fabrication or drilling.

Choose the sink with the cabinet.

Product-reference examples. Record the selection ID and verify the exact model and matching installation information with the order.

S09 / Double-bowl drop-in sink

33 × 22 × 9 in.

Topmount. Deck shown with faucet holes; Two bowls

S10 / Single-bowl apron-front sink

32 7/8 × 22 1/4 × 10 in.

Farmhouse. Silver and black options listed; Exposed apron front

S11 / Double-bowl apron-front sink

33 × 22 × 9 in.

Farmhouse. Divided bowls; Exposed apron front

S12 / White ceramic apron-front sink

29 3/4 × 20 3/4 × 10 in.

Farmhouse. Ceramic; Single bowl

Sink fit: outside size is not the cutout or minimum base size. Handle fit: listed length may differ from screw-hole spacing. Confirm mounting details before fabrication or drilling.

Choose the sink with the cabinet.

Product-reference examples. Record the selection ID and verify the exact model and matching installation information with the order.

S13 / White ceramic single-bowl sink

30 × 18 × 10 in.

Undermount. Ceramic; Single bowl

S14 / Wide white ceramic sink

33 × 20 × 10 in.

Undermount. Ceramic; Single bowl

S15 / Compact bar sink

18 × 16 × 8 in.

Undermount. Small single bowl; Suitable scale for a prep/bar area

S16 / Rectangular prep sink

23 × 18 × 9 in.

Undermount. Single bowl; 9-inch-deep version

Sink fit: outside size is not the cutout or minimum base size. Handle fit: listed length may differ from screw-hole spacing. Confirm mounting details before fabrication or drilling.

Choose the sink with the cabinet.

Product-reference examples. Record the selection ID and verify the exact model and matching installation information with the order.

S17 / Narrow bar sink

17 3/4 × 13 3/4 × 7 7/8 in.

Undermount. Small rectangular bowl; Compact footprint

Sink fit: outside size is not the cutout or minimum base size. Handle fit: listed length may differ from screw-hole spacing. Confirm mounting details before fabrication or drilling.

Choose the finishing hardware.

Product-reference examples. Record the selection ID and verify the exact model and matching installation information with the order.

H01 / Square bar pull

Listed sizes: 96, 128, 160, 224, 320 mm

Available finishes: Brushed brass, Brushed nickel, Matte black

H02 / Rounded bar pull

Listed sizes: 96, 128, 160 mm

Available finishes: Brushed brass, Brushed nickel, Matte black

H03 / Slim rectangular pull

Listed sizes: 96, 128, 160 mm

Available finishes: Brushed brass, Brushed nickel, Matte black

H04 / Stepped bar pull

Listed sizes: 128, 177 mm

Available finishes: Brushed brass, Brushed nickel, Matte black

Sink fit: outside size is not the cutout or minimum base size. Handle fit: listed length may differ from screw-hole spacing. Confirm mounting details before fabrication or drilling.

Choose the finishing hardware.

Product-reference examples. Record the selection ID and verify the exact model and matching installation information with the order.

H05 / Squared bridge pull

Listed sizes: 96, 128 mm

Available finishes: Brushed brass, Brushed nickel, Matte black

H06 / Tubular T-bar pull

Listed sizes: 64, 96, 128, 160, 192, 224, 256, 288 mm

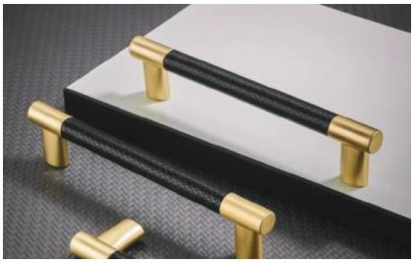

Available finishes: Matte black, Hollow stainless steel

H07 / Classic curved pull

Listed sizes: 76, 96 mm

Available finishes: Brushed nickel, Oil-rubbed bronze

H08 / Brass-accent pull

Listed sizes: 96, 128 mm

Available finishes: Brushed brass

Sink fit: outside size is not the cutout or minimum base size. Handle fit: listed length may differ from screw-hole spacing. Confirm mounting details before fabrication or drilling.

Choose the finishing hardware.

Product-reference examples. Record the selection ID and verify the exact model and matching installation information with the order.

H09 / Bow pull

Listed sizes: 96, 128 mm

Available finishes: Brushed nickel, Oil-rubbed bronze

H10 / Round knob

Single-hole knob; dimensions supplied with quote

Available finishes: Brushed brass, Brushed nickel, Matte black

Sink fit: outside size is not the cutout or minimum base size. Handle fit: listed length may differ from screw-hole spacing. Confirm mounting details before fabrication or drilling.

Plan the sink and hardware fit.

Make these decisions before countertop templating and before drilling any cabinet front.

01 Select the sink mounting method

Undermount sits below a compatible counter; top-mount uses a rim above the cutout; apron-front needs a suitable cabinet and support. Do not convert a sink base without a written detail.

02 Check the complete sink envelope

Record outside width, front-to-back dimension and bowl depth. Confirm minimum cabinet size, clip space, faucet setback, drain and disposal clearance, and support requirements.

03 Choose handles by hole spacing

For replacement pulls, measure center-to-center between screw holes. For new fronts, approve the location and check drawer/door collisions. A knob normally uses one hole.

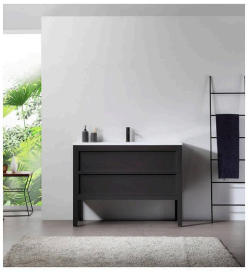

04 Match the screw to the front

Check thread, front thickness and engagement using the hardware maker's instructions. Test a jig and use a backer. Avoid drilling until placement is approved.

Your sink selection	Your handle / knob selection

Relative tier: Premium

Confirm cabinet opening, mechanism load rating, clearances and compatible cabinet system.

Relative tiers compare products within their category; they are not AniPros prices. Confirm current size, finish, material, fit and included parts. Online cards contain expanded selection notes.

Build a coordinated palette.

Appearance concepts using real catalog references. Confirm physical samples, compatible parts and the exact finish before ordering.

Warm neutrals

K002 / Beige Shaker

C010 / Warm Beige Cloud

H09 / Bow pull

A beige cabinet reference with a warm cloud-pattern quartz and curved hardware. Compare actual samples; this is an appearance concept, not a compatibility guarantee.

Light and grounded

K019 / Gray Shaker

C018 / Textured Charcoal Grey

H01 / Square bar pull

A light Shaker finish with charcoal granite and a simple bar pull. Confirm that the photographed cabinet color and chosen hardware finish suit your room lighting.

Dark contrast

K003 / Black Shaker

C008 / White with Gold Veins

H08 / Brass-accent pull

Black Shaker cabinetry, a white-and-gold quartz reference and a brass-accent pull. Approve the slab veining and exact metal finish together.

Plan the edge and backsplash.

Choose details with the fabricator before approving the slab layout. Profiles depend on the specific material and thickness.

01 Simple eased or beveled edge

A restrained profile can simplify the fabrication scope. Confirm the minimum edge radius, exposed finish and chip sensitivity for the chosen material.

02 Rounded profiles

Bullnose and similar profiles change the visual thickness and feel. Not every material or thin slab supports the same profile.

03 Mitered built-up edge

A miter can create a thicker appearance. Confirm seam visibility, pattern continuity, adhesive, support and fabrication cost.

04 Waterfall end

A vertical return adds material, handling and seam planning. Approve vein direction and end support before cutting.

05 Backsplash or full-height slab

Record outlets, switches, wall flatness, corners and appliance clearances. Decide between matching slab, tile or another compatible finish. Use a qualified trade for electrical changes.

Edges are fabrication options, not universal stock products. Ask for a physical edge sample and an itemized price for your exact surface.

Turn favorites into an order.

Use selection IDs from the photo library. A wishlist becomes an order only after dimensions, compatibility and availability are checked.

Decision	Your selection / confirmation

Hardware / organizers	IDs: _____
Countertop / sink / faucet	_____
Delivery / assembly / installer	_____
Quote reference / date	_____

- ☐ Layout and actual cabinet dimensions approved
- ☐ Appliance openings and clearances verified
- ☐ Fillers, panels, toe kicks and trim included
- ☐ Required attachment hardware and supports identified
- ☐ Lead times, delivery and damage-reporting terms recorded

Check every cabinet in the run.

Complete one row per cabinet or opening. Repeat this page for each wall and island.

Wall / ID	W × H × D	Quantity	Use / hinge / finished end
_____	_____	____	_____
_____	_____	____	_____
_____	_____	____	_____
_____	_____	____	_____
_____	_____	____	_____

_____	_____	____	_____
_____	_____	____	_____
_____	_____	____	_____
_____	_____	____	_____
_____	_____	____	_____

Add appliance openings, fillers, panels and corner allowances to the cabinet widths. Recheck the full run against field dimensions. Attach the final marked layout and appliance sheets.

Receive, inspect and organize.

Check the order before the work depends on it. Keep packaging and evidence of damage until the reporting process is complete.

01 Count the delivery

Match the packing list to cabinet IDs, fronts, panels, trim and hardware. Photograph cartons and labels.

02 Inspect before assembly

Check exposed finishes, corners, joints and panels. Follow the supplier's reporting deadline and instructions.

03 Protect the parts

Store flat and dry as directed. Protect finished faces and keep hardware with its matching cabinet.

04 Stage by installation sequence

Mark each unit's room position. Keep the work route clear and avoid stacking weight on unsupported doors.

05 Pause for discrepancies

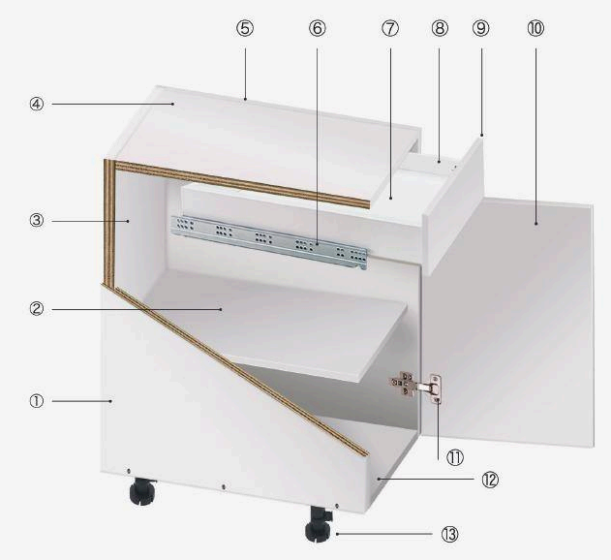

Resolve missing, damaged or mismatched parts before irreversible cuts or installation. Do not force a wrong-size product into place.

Temporary kitchen: arrange drinking water, meals, refrigerator access, dishwashing and waste disposal. Separate dust from occupied areas; keep children and pets out of the work zone.

Assemble one cabinet first.

Learn the actual joint system on one unit before repeating the process. The product manual governs the order, glue use and hardware.

01 Identify and prepare

Read the full assembly sheet. Count hardware, identify panel orientation and protect all finish surfaces.

02 Join and square

Use the specified cams, dowels, brackets or screws. Control driver torque. Compare diagonals before final tightening.

03 Test before repeating

Inspect joints and back attachment. Test the hardware, label the unit and retain its matching doors and drawers.

Stop for split panels, stripped joints or a twisted box. Do not use wall screws to pull an incorrectly assembled cabinet into shape.

Install with verified support.

This is an installation preparation checklist. Use the actual mounting instructions for your cabinet system and wall construction.

01 Verify the room and structure

Find the floor high point, check wall plumb and identify the required framing, blocking or designed mounting system. Locate concealed services before drilling.

02 Dry-fit the complete layout

Check corners, fillers, appliance openings and finished ends. Follow the product's installation sequence and support plan.

03 Lift, level and secure

Use suitable lifting support and a capable helper. Shim or adjust feet as specified. Fasten through approved mounting areas into verified support.

04 Join and recheck

Joining cabinets together does not replace wall attachment. Recheck level, plumb, door gaps and the full countertop support line.

05 Confirm special conditions

Secure tall units against tipping. Obtain an approved island anchoring plan. Confirm countertop supports with the fabricator.

Uncertain structure, attachment details or concealed utilities require qualified help. Do not improvise structural fastening through thin backs, drywall or decorative trim.

Finish, adjust and inspect.

Complete adjustments only after the boxes are square, level, aligned and secured.

01 Fit the panels and trim

Scribe carefully, test-fit and preserve service access. Use the intended decorative fasteners.

02 Adjust doors and drawers

Follow the hinge and slide sequence. Check the box first if the front will not align. Confirm full opening without collisions.

03 Drill for hardware

Align gaps, test the jig on scrap and confirm screw length. Use a backer to protect the finish.

04 Coordinate final trade work

Finish counters and backsplash, then arrange qualified utility reconnections. Check plumbing for leaks and appliances for access.

05 Keep the records

Save the final layout, order, manuals, sample approvals and warranty details. Photograph completed connections and access locations.

If a cabinet moves, rocks, sags or separates, unload it and have the attachment assessed. Caulk and trim do not repair structural problems.

DIY with help where you need it.

Choose only the tasks you want help with. Keep ownership of the project and agree on each handoff before work starts.

01 Get the room measured

A measuring visit helps turn rough notes into a usable room sketch. You still approve the layout and provide final appliance information.

02 Get help with the cabinet layout

Discuss cabinet positions, storage and finishes. Design help does not automatically include engineering, permits or utility plans.

03 Have cabinets assembled and delivered

Preassembled boxes save assembly time but need more transport and storage space. You still handle site fitting, leveling, attachment and final adjustment unless separately quoted.

04 Bring in help for the finishing tasks

Handle drilling, drawer adjustment, organizer fitting and trim can be separate scopes. Identify what is ready, what is supplied and what is excluded.

No full-remodel commitment required. The free guide and qualifying-purchase workshop are separate from paid services. Only the written quote defines the actual work, price and schedule.

DIY support service menu.

PROPOSED PRICING FOR REVIEW - These are suggested launch rates, not confirmed current AniPros charges. Final scope and pricing must be agreed before booking.

Kitchen planning conversation

Free / 20 minutes

Includes: Phone or showroom discussion of your goals, cabinet choices and next steps.

You handle: Bring room photos, rough dimensions and your questions.

No measured drawings, site visit or construction design.

On-site kitchen measuring

$149 / one kitchen

Includes: One visit, room dimensions, visible service locations and a dimensioned room sketch.

You handle: Provide access and final appliance model sheets; approve the proposed layout.

Within 15 road miles of the Yuma office. Up to 60 minutes on site. No concealed-condition investigation or permit drawings.

Cabinet layout + design consultation

$249 / one kitchen

Includes: Up to 20 cabinet positions, one proposed layout, elevations, cabinet list and one revision.

You handle: Supply verified measurements and appliance sheets; approve finish samples and order.

Measuring visit separate. Additional revisions or major layout changes quoted. No structural, utility or permit plans.

Standard cabinet assembly

$65 / cabinet

Includes: Shop assembly of one standard wall, door-base or sink-base cabinet, with supplied hardware and initial adjustments.

You handle: Handle installation, site fitting and final adjustment after mounting.

AniPros-supplied RTA cabinets; $250 assembly-order minimum. Drawer bases $95 each; tall or corner units from $150 each. Modifications and organizers separate.

USD. Product purchases, applicable tax and work outside the stated scope are separate. These draft rates are not part of the 15% cabinet discount. No purchase-credit policy is assumed.

PROPOSED PRICING FOR REVIEW - These are suggested launch rates, not confirmed current AniPros charges. Final scope and pricing must be agreed before booking.

Local flat-pack delivery

$149 / delivery

Includes: One scheduled trip, up to 20 cabinet cartons, ground-level garage or covered-entry drop.

You handle: Provide a clear route, dry storage and an adult to receive and check the order.

Within 15 road miles of Yuma office. Assembled-cabinet delivery from $249, up to 15 units. Stairs, inside carry, extra trips and longer distances quoted.

Handle and knob fitting

$12 / piece

Includes: Layout and drilling with a jig; fitting of one supplied handle or knob to a suitable front.

You handle: Select and provide compatible hardware; approve placement before drilling.

$150 visit minimum. Hardware, damaged-hole repairs and specialty fronts separate.

Door and drawer adjustment

$199 / visit

Includes: One visit of up to 90 minutes to adjust up to 20 doors or drawer fronts on already installed cabinets.

You handle: Have boxes square, level and securely installed; keep matching hardware available.

Within 15 road miles. Replacement parts, cabinet reassembly, mounting repairs and added time quoted.

Targeted project help

Written quote

Includes: Choose a defined task: cabinet demolition, disposal, filler and trim fitting, organizer fitting or countertop coordination.

You handle: Keep the rest of the project and agree on the handoff point before work starts.

Scope, access, quantities and site conditions set the price. Utility reconnections and structural work require the appropriate qualified trade.

USD. Product purchases, applicable tax and work outside the stated scope are separate. These draft rates are not part of the 15% cabinet discount. No purchase-credit policy is assumed.

Bring your plan to the workshop.

Use the free guide first, then practice the actual cabinet system with hands-on instruction.

- ☐ Measured room sketch and wall photos
- ☐ Appliance model sheets
- ☐ Cabinet and organizer selection IDs
- ☐ Your kit’s assembly and mounting instructions
- ☐ List of tools owned, borrowed or still needed
- ☐ Questions about corners, leveling and attachment

Workshop practice: identify parts, assemble and square a cabinet, understand leveling and mounting principles, and adjust doors and drawers. Confirm the date, location, format and what to bring directly with AniPros.

NOVEMBER + DECEMBER 2026
15% off kitchen cabinets plus a free assembly and installation workshop with a minimum $2,500 cabinet purchase after discount, before tax. The workshop includes instruction; home installation labor is separate.

Ask about your cabinet order.

(928) 408-2038 | remodel@anipros.com

The guide is free. No purchase, appointment or commitment to hire AniPros required.

Keep the details that matter.

Use the guide to plan and ask better questions. Keep the approved product instructions with you throughout the work.

01 Product specifications come first

Photos show source product examples and finish references. Dimensions, materials, warranties, availability and compatibility must be confirmed for the exact order. Similar names do not mean matching products.

02 Use qualified help where needed

Structural changes, utility work, uncertain attachment conditions and hazardous materials call for qualified professionals and any applicable approvals.

03 Check before disturbing older materials

Assess older painted surfaces and suspect materials before sanding, drilling or demolition. Use qualified assessment where lead or asbestos may be present.

04 Keep a complete project packet

Store the room sketch, measurements, appliance sheets, quote, order confirmation, delivery records, installation instructions and care documents together.
